Flood Disconnect Policy

Due to recent flooding impacting a number of our valued customers, OPPD has initiated the following flood disconnect policy.

If a customer requests that we disconnect their power due to flooding, and crews are able to get to the residence and it is the only residence impacted we will disconnect the power. We will also disconnect power if a city official or other government entity requests we do so or if they officially evacuate an area.

Reconnections will only occur when an approval is received from the proper authorities who reside over the area. If customers contact you for assistance please consult your local inspection authority regarding permit acquisition.

New Electrical Service Designer Territory Maps

With recent retirements and relocation of several ESD's, we have updated our territory maps. Attached is an 8 ½ x 11 copy of the current maps. If you would like additional hard copies please contact Tammy at (402)552-5330.

Service Center maps are available at www.oppd.com . Click on one of the green tabs (Residential Customers, Business Customers or Contractors & Developers). Then Click on Electrical Service Designers to open up a map that will provide the service center boundaries and main telephone numbers.

We value your partnership in providing electrical service to our customer owners. We also welcome your feedback. Email us at Contactor@oppd.com.
