PROGRAM DETAILS (Program rules and details are subject to change without notice.)

Qualifications for Program

This program is available to anyone who purchases and installs new high-efficiency A/C's and/or heat pumps per current program guidelines in a residential (individually metered) structure. **REBATES ARE NOT RETROACTIVE**. Qualifying rebate amount is based on the efficiency rating indicated on the AHRI¹ Certificate. The structure must qualify for residential rate (110, 115) and be served by OPPD. In addition, customers who install qualifying heat pumps can qualify for the lower winter electric rate. Qualifying equipment includes new A/C's and electric heat pumps equal to or greater than 15 SEER² or 10 EER for SPVU's. Equipment may be inspected by OPPD before acceptance into the program. (See *verification of equipment below.*)

Energy Conservation Rate (Heat Pumps only)

The rate will be effective in the customer's current billing cycle when OPPD receives and processes the application. To qualify, the electric heat pump must supply at least 50% of the space conditioning requirements for the structure and have an outdoor sensor/thermostat setting of 20°F or lower. A lower winter efficiency rate is available for those customers with installed heat pumps of 14 SEER (or 10 EER for SPVU's) or greater. This conservation service rate (115) is the same as the standard residential rate except for a lower last rate block in the winter billing period (October through May). Rate 115 is guaranteed for an additional 5 years in the event the program is terminated. Determination of equipment qualification for the Residential Energy Conservation Rate 115 will be at the **sole discretion of OPPD**.

Heat Gain/Heat Loss Calculation

It is recommended that a Heat gain/heat loss calculation (Manual J or equivalent) be completed to ensure proper equipment sizing. The heating and cooling contractor should perform this calculation for all installations.

Capacity and Efficiency Verification

HVAC equipment may be checked for model # and matching coils according to AHRI, by OPPD before acceptance into the program. Equipment may also be inspected for performance within the parameters of the manufacturer's specifications. If the heat pump does not meet these performance standards, OPPD will contact the customer and heating and cooling contractor to make the necessary adjustments. Payment and rate change may be withheld until necessary corrections are made.

Disclaimer

OPPD's inspection and/or qualification of any equipment or installation shall not act as, nor be construed or deemed to be, any guarantee, endorsement or warranty by OPPD of the quality, safety, workmanship, operation or energy efficiency of any such equipment or installation. OPPD hereby expressly disclaims any such guarantee, endorsement or warranty. Applicant and its equipment provider hereby acknowledge and agree that OPPD shall have no obligation or liability for any inspection performed or qualification granted by OPPD on any equipment or installation nor for the replacement, repair, maintenance or servicing of any such equipment or installation. Equipment selection is entirely the decision of the homeowner/HVAC contractor. OPPD makes no warranties, expressed or implied, with any respect to equipment purchased or installed, including thermostats. Cost savings will vary according to, among other variables, the manner which the customer uses the equipment, weather, home efficiency, utility costs, etc. Energy savings is estimated based on averages.
