Executive Summary

Omaha Public Power District (OPPD) owns and operates a five-unit fuel-fired generating plant at the North Omaha Station (NOS) in Omaha, Nebraska. Units 1, 2, and 3 were retired from operation (converted to natural gas), while Units 4 and 5 are still operating as coal-burning units through the year 2023. NOS is located east of Pershing Drive and Craig Street, approximately 3.5 miles northwest of Eppley Airfield, along the west bank of the Missouri River at river mile 625.2. On April 17, 2015, the United States Environmental Protection Agency published the final rule for the regulation and management of coal combustion residuals (CCR) under Subtitle D of the Resource Conservation and Recovery Act. The rule is formally promulgated in the U.S. Code of Federal Regulations (CFR), Title 40, Part 257. The purpose of this report is to provide a summary of CCR groundwater monitoring system activities for calendar year 2020 for the assessment monitoring program under 40 CFR §257.95.

The NOS Ash Landfill transitioned from detection monitoring to assessment monitoring following the November 2017 sampling event due to statistically significant increases (SSIs) above the background threshold values in downgradient monitoring wells. OPPD evaluated an alternate source demonstration (ASD) for the SSIs, but the ASD was unsuccessful and OPPD initiated assessment monitoring in June 2018 and a subsequent event in October 2018. Results indicated multiple Appendix IV constituents at statistically significant levels (SSLs) above the groundwater protection standards (GWPS). OPPD published a notification of the exceedances on February 14, 2019, and a notification of initiation of assessment of corrective measures (ACM) on May 30, 2019. An initial ACM report was completed on July 5, 2019.

OPPD has continued to comply with CCR regulations and has made progress towards selecting a remedy by obtaining additional site information necessary to understand the hydrogeologic system at the NOS Ash Landfill. A Conceptual Site Model (CSM) was prepared to describe the site-specific geologic and hydrogeologic regimes. OPPD also submitted the NDEE Title 132 Nature & Extent Report (HDR, 2019a). Using the CSM, a 3-dimensional computer-based groundwater flow model was prepared to create a digital representation of the groundwater flow system. Semi-annual updates describing the progress in selecting a corrective action at the NOS Ash Landfill were completed on January 6, 2020 and July 6, 2020.

Two semi-annual sampling events were conducted in 2020; one sampling event in April 2020 and one sampling event in October 2020. Results of the April 2020 analysis indicated 26 SSIs for Appendix III constituents and 16 additional SSIs for Appendix IV constituents.

The identified SSIs following the April 2020 sampling event are:

Currently, OPPD is developing a transient flow model and groundwater fate & transport model to support remedy selection. The Site will continue to be monitored in accordance with the assessment monitoring program as specified in 40 CFR §257.96(b), and the next semi-annual sampling event is anticipated to occur in April 2021.

1 Introduction

On April 17, 2015, the United States Environmental Protection Agency (EPA) published the final rule for the regulation and management of coal combustion residuals (CCR) under Subtitle D of the Resource Conservation and Recovery Act. Disposal of CCR from Electric Utilities final rule is formally promulgated in the U.S. Code of Federal Regulations (CFR), Title 40, Part 257 (EPA, 2015). The rule – effective on October 19, 2015 – applies to electric utilities and independent power producers that fall within North American Industry Classification System code 221112, and facilities that produce or store CCR materials in surface impoundments or landfills. The CCR rule defines a set of requirements for the disposal and handling of CCR within units (defined as either landfills or surface impoundments). This regulation applies to the Omaha Public Power District (OPPD) North Omaha Station (NOS).

1.1 Purpose

Specified in 40 CFR §257.90(e), an owner or operator of an existing CCR landfill must prepare an annual groundwater monitoring and corrective action report to summarize any key actions completed, problems encountered, and upcoming activities related to the groundwater monitoring system. The information included in this report complies with the requirements established in 40 CFR §257.90(e) and provides a summary of CCR groundwater monitoring system activities for calendar year 2020.

1.2 Facility Information

OPPD owns and operates a five-unit fuel-fired generating plant at NOS, herein referenced as "Station" or "Site", in Omaha, Nebraska. Units 1, 2, and 3 were retired from operation (converted to natural gas), while units 4 and 5 were retrofitted with air pollution control equipment and are in operation as coal-burning units through the year 2023. The Station is located east of Pershing Drive and Craig Street, approximately 3.5 miles northwest of Eppley Airfield, along the west bank of the Missouri River at river mile 625.2. The first generating unit was placed in service in July 1954, and the fifth unit was placed in operation in 1968. Beneficial use and disposal of the fossil fuel combustion ash has occurred on the Site since the 1950s.

This Station has one closed landfill and one existing active CCR landfill, known as the NOS Ash Landfill, as shown in **Figure 1** (attached). The NOS Ash Landfill is permitted under the current Nebraska Department of Environment and Energy (NDEE) Title 132 regulations for fossil fuel combustion ash landfills (NDEE Permit No. NE0054739, Facility ID 59763). The NOS Ash Landfill consists of an unlined active CCR landfill of approximately 18 acres and a 1.4-acre undeveloped portion. **Figure 1** identifies the relevant CCR unit for this report and the supporting monitoring well network.

2 Monitoring Program Summary

The groundwater monitoring system currently includes ten monitoring wells consisting of three upgradient/background monitoring wells (MW-9, MW-18, MW-19) and seven downgradient/compliance monitoring wells (MW-2, MW-5, MW-6, MW-8, MW-13, MW-15, and MW-17). Monitoring well details for the monitoring network, including the date of installation, is provided

in **Table 1** (attached). The location of the monitoring wells in the groundwater monitoring program with respect to the NOS Ash Landfill are shown in the attached **Figure 1**.

2.1 Transition of Monitoring Programs

On January 31, 2018, OPPD published statistically significant increases (SSIs) detected in November 2017 in downgradient monitoring wells at the NOS Ash Landfill for 17 monitoring well/constituent pairs. These SSIs were noted in multiple wells and included boron, calcium, chloride, sulfate, and total dissolved solids (TDS). OPPD conducted an alternate source demonstration (ASD) for the SSIs to evaluate potential error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality. The ASD was unsuccessful and OPPD published a notification (dated May 29, 2018) stating the facility had initiated an assessment monitoring program in accordance with 40 CFR §257.95.

Assessment monitoring was initiated in June 2018 and a subsequent event was conducted in October 2019. During each event background and compliance monitoring wells were sampled and sample analyzed for both 40 CFR §257 Appendix III and 40 CFR §257 Appendix IV. Results of the statistical analysis of the data indicated multiple Appendix IV constituents were detected at statistically significant levels (SSLs) above the groundwater protection standards (GWPS). OPPD published a notification of the SSLs on February 14, 2019, and a notification of initiation of assessment of corrective measures (ACM) (HDR, 2019c). An initial ACM report was completed on July 5, 2019. During the completion of the report, data gaps were identified. Additional site information was obtained and submitted in the NDEE Title 132 Nature & Extent Report (HDR, 2019a).

2.2 Groundwater Monitoring Network Condition Assessment

OPPD personnel evaluated the condition of each monitoring well in the groundwater monitoring network during the semi-annual sampling events in April 2020 and October 2020. During this time period, no repairs were required. The wells were noted in good working condition, concrete pads were intact, and no damage was observed to the protective well casings. No monitoring wells were added to or abandoned from the certified groundwater monitoring system in 2020.

3 Data Evaluation and Summary

3.1 Summary of Sampling Activities

Groundwater sampling events were conducted by OPPD personnel in April 2020 and October 2020 as continuation of the assessment monitoring program in accordance with 40 CFR §257.96(b). Samples were collected in general compliance with 40 CFR §257.90(c), which requires groundwater monitoring be conducted throughout the active life and post-closure care period of the CCR unit for each current background and downgradient well in the monitoring network. The number of samples collected for each background and downgradient well during each groundwater sample event, whether the sample was collected during detection or assessment monitoring programs, and the date of each event is summarized in **Table 2**.

Groundwater sampling was conducted by OPPD personnel in general accordance with the facility's NDEE Title 132 Groundwater Sampling and Analysis Plan (HDR, 2019b) and the

Groundwater Monitoring System Certification (HDR, 2020a). Samples were analyzed for Appendix III and Appendix IV constituents during both the April 2020 and October 2020 sampling events. Field sampling forms from the 2020 semi-annual sampling events are provided in **Appendix A**. The collected groundwater samples were analyzed by Eurofins TestAmerica. The laboratory analytical reports are provided in **Appendix B**.

3.2 Groundwater Elevations & Flow Direction

Static groundwater level measurements were recorded at the monitoring wells specified in **Table 1** prior to purging and sampling activities conducted during the groundwater sampling events. Groundwater measurements of both monitoring network wells and water level only wells, specified in **Table 1**, were obtained on October 1, 2020 and were used to develop groundwater contours. Monitoring well static groundwater elevations from the October 1, 2020 Site groundwater elevation measurement event are provided in **Table 3**. Groundwater measurements collected during the April 2020 sampling event indicated a flow direction to the east/northeast, with an average flow velocity of 0.00432 ft/day to 0.299 ft/day. Groundwater measurements collected during the October 2020 sampling event indicated a flow direction to the east/northeast with an average flow velocity of 0.00423 ft/day to 0.293 ft/day. The April 2020 and October 2020 flow velocities are based on a range of hydraulic conductivity at the Site of 0.054 ft/day to 3.77 ft/day (HDR, 2020a).

3.3 Assessment Monitoring Groundwater Sampling

The NOS Ash Landfill was monitored semi-annually in 2020 as continuation of the assessment monitoring program in accordance with 40 CFR §257.96(b). Appendix III and Appendix IV constituents were analyzed for both the April 2020 and October 2020 sampling events, meeting the requirements of 40 CFR §257.95. The results of the assessment monitoring events in April 2020 and October 2020 are presented in **Table 4** (Appendix III constituents) and **Table 5** (Appendix IV constituents).

3.4 Statistical Analysis Results

3.5 Other Information Required under 40 CFR §257.90-98

OPPD has continued to comply with CCR regulations and has made progress towards selecting a remedy by obtaining additional site information necessary to understand the hydrogeologic system at the NOS Ash Landfill. A CSM was prepared in 2020 to describe the site-specific geologic and hydrogeologic regimes that influence the extent and potential migration pathways of CCR and Title 132 constituents. Following the CSM, a 3-dimensional computer-based groundwater flow model was prepared to create a digital representation of the groundwater flow system to predict groundwater movement as well as further evaluate the feasibility of potential remedial measures. Currently, OPPD is developing a transient flow model and fate & transport model to support remedy selection.

In accordance with 40 CFR §257.97(a), a semi-annual update describing the progress in selecting and designing a remedy for corrective action at the NOS Ash Landfill was placed in the operating record on January 6, 2020 and July 6, 2020. No other information is required under 40 CFR §257.90-98 at this time.

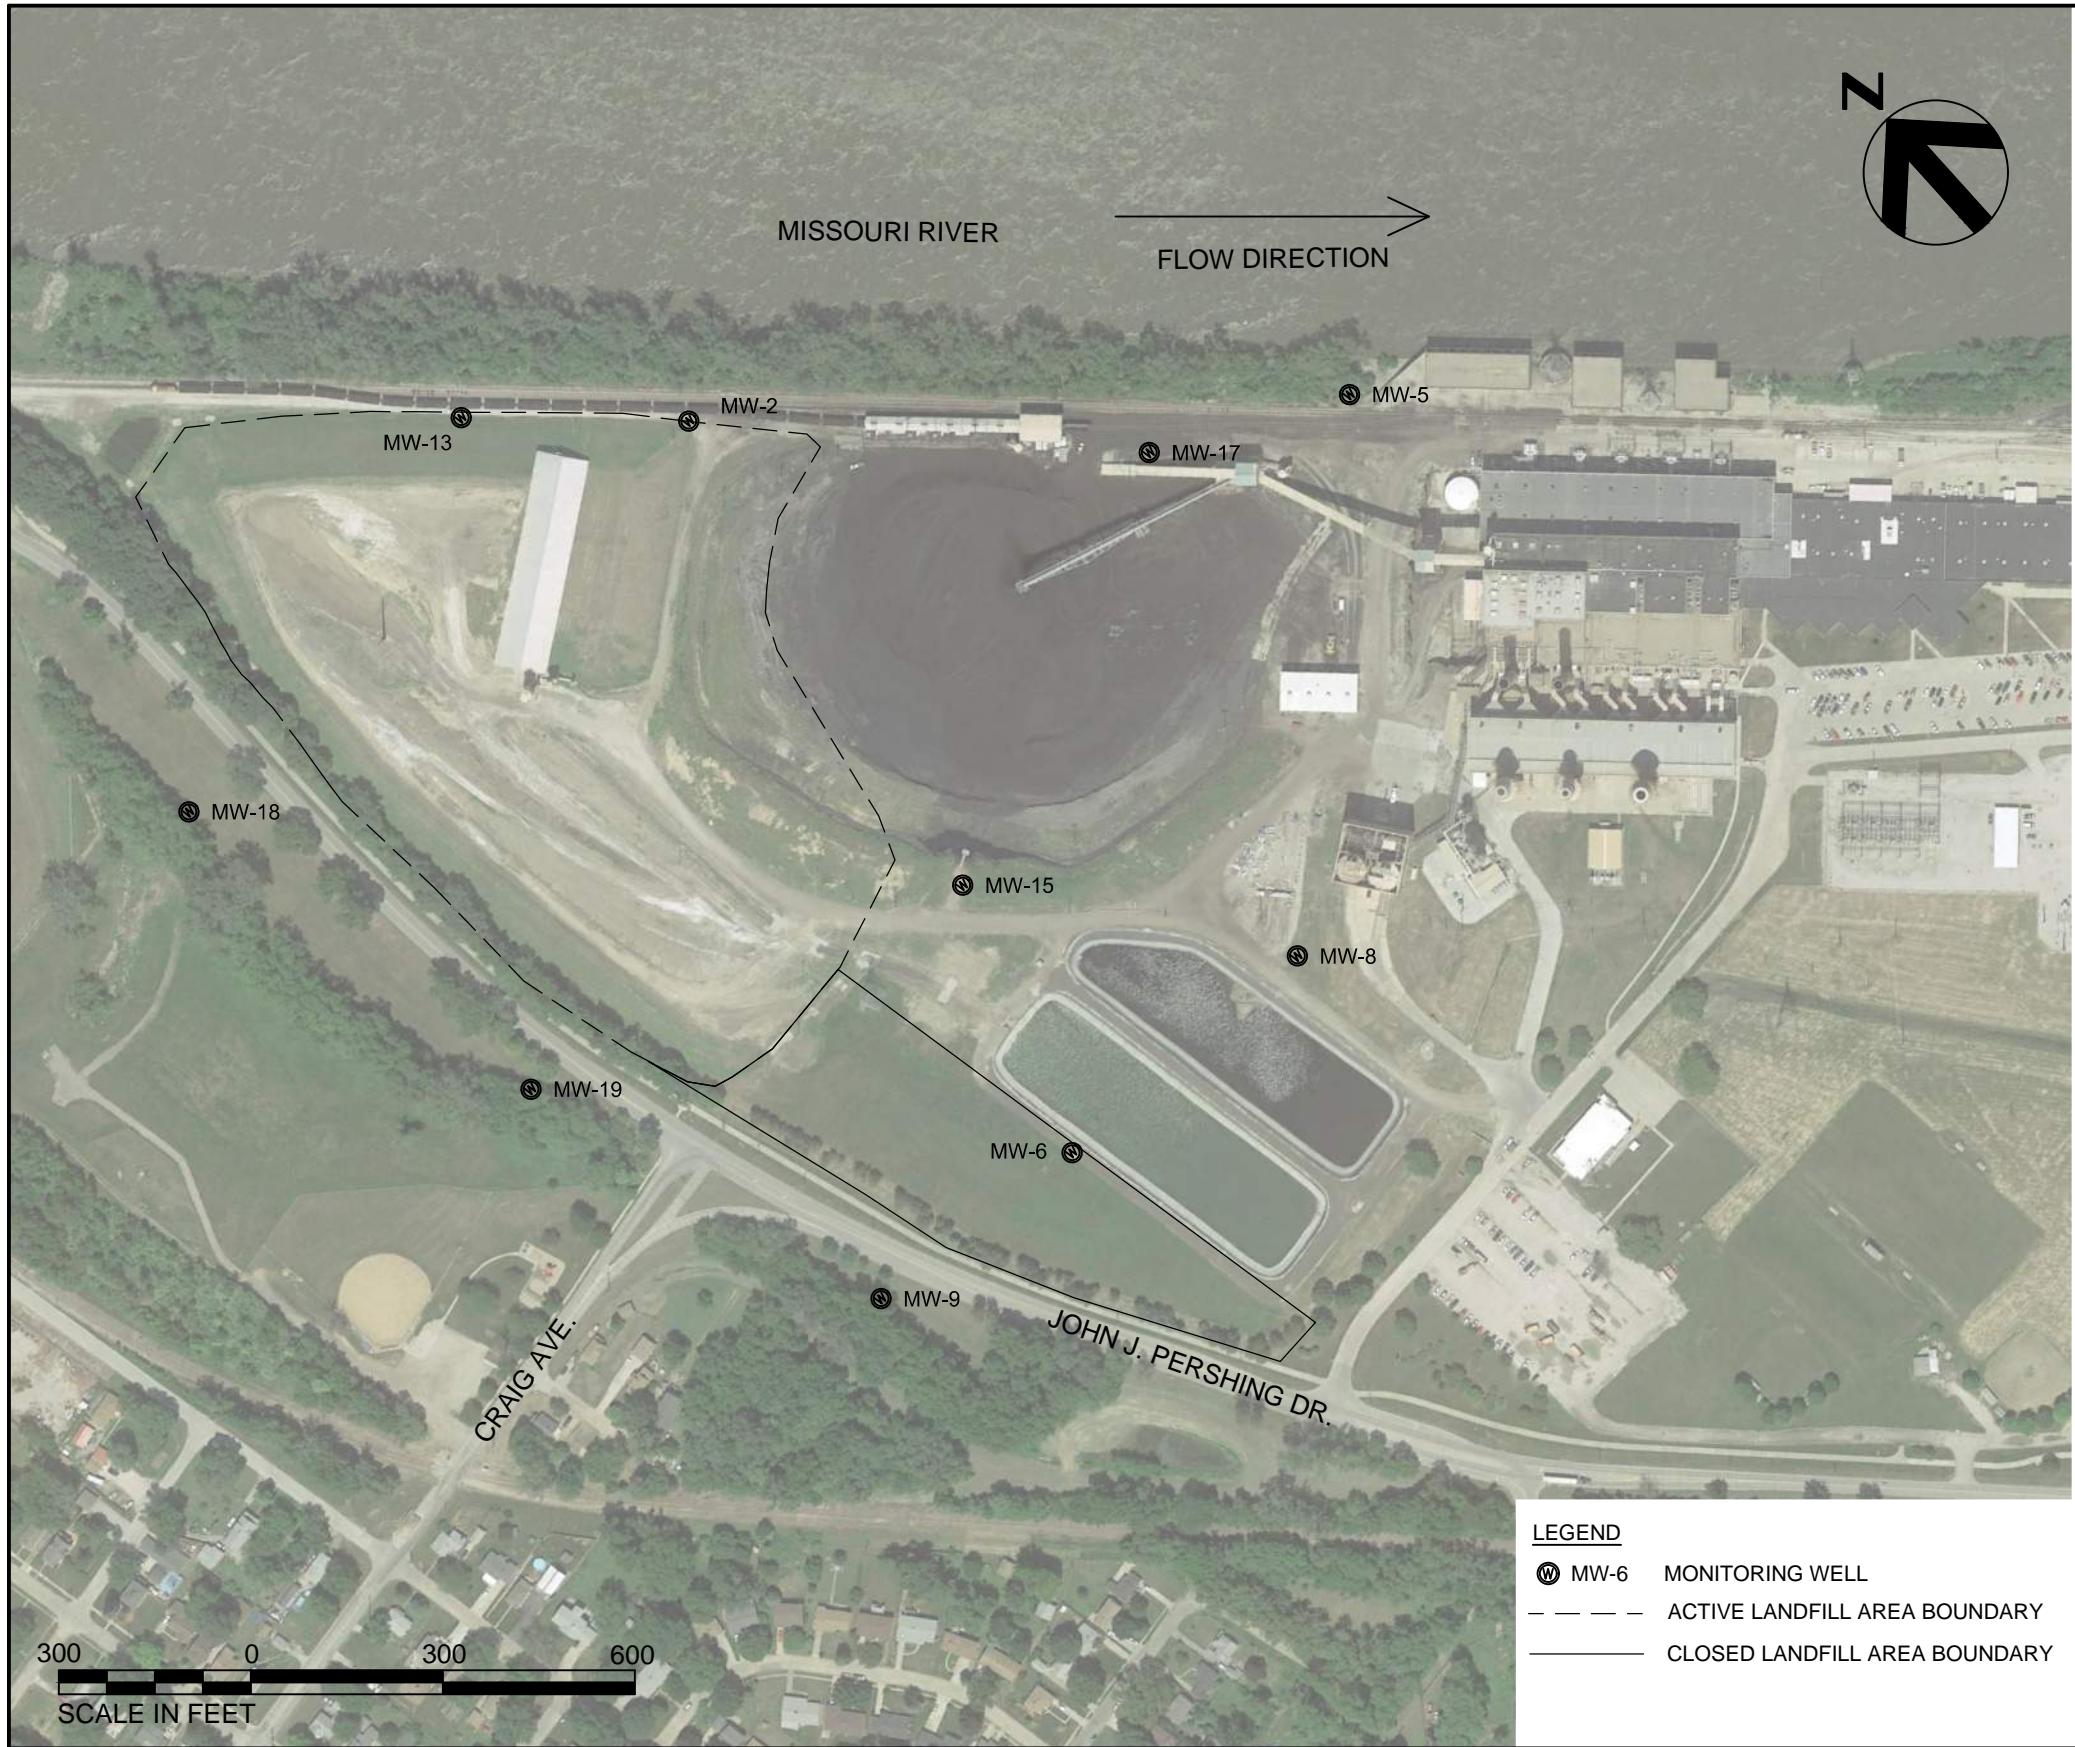

4 Key Activities for Upcoming Year

OPPD will continue to make progress towards selection and design of remedy for corrective action at the NOS Ash Landfill. In accordance with 40 CFR §257.97(a), a semi-annual update describing the progress in selecting and designing a remedy was placed in the operating record in January 2021. The Site will continue to be monitored in accordance with the assessment monitoring program as specified in 40 CFR §257.96(b), and the next semi-annual sampling event is anticipated to occur in April 2021.

Notes:

mg/L = milligrams per liter

NA = Analyte Not Analyzed/Measured.

< = for the period of March 2016 through October 2019, the symbol indicates analyte not detected above the reporting limit, which is the value shown following the "<" symbol. Starting in January 2020, the symbol indicates analyte not detected above the method detection limit, which is the value shown following the "<" symbol.

* Fluoride is listed in both Appendix III and Appendix IV of the CCR Final Rule (40 CFR Part 257).

J = Value is less than the Reporting Limit but greater than or equal to the Method Detection Limit and the concentration is an approximate value.

Notes:

mg/L = milligrams per liter

pCi/L = picoCuries per liter

NA = Analyte Not Analyzed/Measured.

< = for the period of March 2016 through October 2019, the symbol indicates analyte not detected above the reporting limit, which is the value shown following the "<" symbol. Starting in January 2020, the symbol indicates analyte not detected above the method detection limit, which is the value shown following the "<" symbol.

* Fluoride is listed in both Appendix III and Appendix IV of the CCR Final Rule (40 CFR Part 257).

U = Result is less than the sample detection limit.

J = Value is less than the Reporting Limit but greater than or equal to the Method Detection Limit. The concentration is an approximate value.

Receipt

The samples were received on 4/16/2020 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.4° C, 0.8° C and 0.8° C.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Method 6020A: The continuing calibration verification (CCV) associated with batch 310-276721 recovered above the upper control limit for Boron and Selenium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW9 (310-179739-5) and MW18 (310-179739-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt

The samples were received on 10/9/2020 9:20 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.3° C, 2.5° C and 2.8° C.

HPLC/IC

Method 9056A: The continuing calibration verification (CCV) associated with batch 310-295631 recovered above the upper control limit for Fluoride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW9 (310-192648-5), MW15 (310-192648-7), MW17 (310-192648-8), MW18 (310-192648-9) and DUP1 (310-192648-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6020A: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following sample: MW17 (310-192648-8).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

RAD

Methods 904.0, 9320: 904/9320 prep batch 485913

The LCS recovery (127%) for Ra228 was outside the upper QC limits of 75-125. It was within our statistical upper limit of 138%. The LCSD recovered at 114% of the true value and the RER/RPD was acceptable. Original results will be qualified and reported.

Method PrecSep_0: Radium 228 Prep Batch 160-485913:

Samples 310-192648-1, 310-192648-2, 310-192648-6, 310-192648-9, and 310-192648-10 were prepared at a reduced aliquot due to yellow discoloration: Samples 310-192648-3 and 310-192648-5 were prepared at a reduced aliquot due to a cloudy appearance.

Method PrecSep-21: Radium 226 Prep Batch 160-485829:

Samples 310-192648-1, 310-192648-2, 310-192648-6, 310-192648-9, and 310-192648-10 were prepared at a reduced aliquot due to yellow discoloration: Samples 310-192648-3 and 310-192648-5 were prepared at a reduced aliquot due to a cloudy appearance.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Technical Memorandum

From: HDR Engineering, Inc.

Subject: Summary of Statistical Analysis and Evaluation for SSLs
North Omaha Station Ash Landfill
Spring 2020 CCR Groundwater Monitoring Report

OPPD owns and operates a five-unit fuel-fired generating plant at the North Omaha Station (NOS), herein referenced as “Station” or “Site”, in Omaha, Nebraska. Units 1, 2, and 3 were retired from operation (converted to natural gas), while Units 4 and 5 are operating as coal-burning units through the year 2023. This Station has one active coal combustion residuals (CCR) landfill, known as the North Omaha Station (NOS) Ash Landfill, which is subject to the United States Environmental Protection Agency’s (EPA’s) final CCR rule promulgated under 40 C.F.R Part 257 and Nebraska Department of Environment and Energy’s (NDEE) Title 132 regulations for fossil fuel combustion ash disposal areas. This memorandum provides a discussion and evaluation of the statistical analysis conducted for the NOS Ash Landfill which consists of an unlined active CCR landfill of approximately 18 acres and a 1.4-acre undeveloped portion.

Groundwater sampling was completed as part of an assessment monitoring program for the NOS Ash Landfill in April 2020, (as specified in 40 CFR §257.95(d) and NDEE Title 132 Chapter 7 Section 005.06). The statistical analysis of groundwater data was performed in accordance with the methods described in the *Groundwater Monitoring Statistical Certification* for the North Omaha Station – NOS Ash Landfill, amended January 24, 2020. Sampling results used to update background threshold values (BTVs) were obtained during monitoring events performed between March 2016 and October 2019. Downgradient sampling results from the April 2020 assessment monitoring sampling event were used to evaluate for statistically significant increases (SSIs) over background and statistically significant levels (SSLs) over the groundwater protection standard (GWPS). The calculated BTVs and the evaluation for SSIs over background for the Appendix III constituents and Appendix IV constituents are provided in **Table C1**. The calculated lower confidence levels (LCLs) and the evaluation for SSLs over the GWPS for the Appendix IV constituents are provided in **Table C2**. No new SSLs were identified during the spring 2020 sampling event.

Units 1, 2, and 3 were retired from operation (converted to natural gas), while Units 4 and 5 are operating as coal-burning units through the year 2023. This Station has one active coal combustion residuals (CCR) landfill, known as the NOS Ash Landfill, which is subject to the United States Environmental Protection Agency’s (EPA’s) final CCR rule promulgated under U.S. Code of Federal Regulations (CFR), Title 40, Part 257 and Nebraska Department of Environment and Energy’s (NDEE) Title 132 regulations for fossil fuel combustion ash disposal areas. This memorandum provides a discussion and evaluation of the statistical analysis conducted for the NOS Ash Landfill which consists of an unlined active CCR landfill of approximately 18 acres and a 1.4-acre undeveloped portion.

Groundwater sampling was completed as part of an assessment monitoring program for the NOS Ash Landfill in October 2020 (as specified in 40 CFR §257.95(d) and NDEE Title 132 Chapter 7 Section 005.06). The statistical analysis of groundwater data was performed in accordance with the methods described in the Groundwater Monitoring Statistical Certification for the North Omaha Station – NOS Ash Landfill, amended January 24, 2020. Sampling results used to update background threshold values (BTVs) were obtained during monitoring events performed between March 2016 and October 2019. Downgradient sampling results from the October 2020 assessment monitoring were used to evaluate for statistically significant increases (SSIs) over background and statistically significant levels (SSLs) over the groundwater protection standard (GWPS). The calculated BTVs and the evaluation for SSIs over background for the Appendix III constituents and Appendix IV constituents are provided in **Table C1**. The calculated lower confidence levels and the evaluation for SSLs over the GWPS for the Appendix IV constituents are provided in **Table C2**. One new SSL, cobalt at MW-6, was identified during the fall 2020 sampling event.

Bold and underlined concentration indicates an SSL over the GWPS.

* indicates the lower bound of the range is the lower GWPS limit.

**The upper bound is the upper GWPS limit.

[1] GWPS is established as the U.S. EPA Maximum Contaminant Level (MCL) or the GWPS specified in 40 CFR §257.95(h)(2).

[2] GWPS is established as the UPL when the background level is higher than the U.S. EPA MCL or the GWPS specified in 40 CFR §257.95(h)(2), or as the LPL when the background level is lower than the U.S. EPA MCL (i.e. pH).
